Agenda

- 1 Purpose**
- 2 Front page**

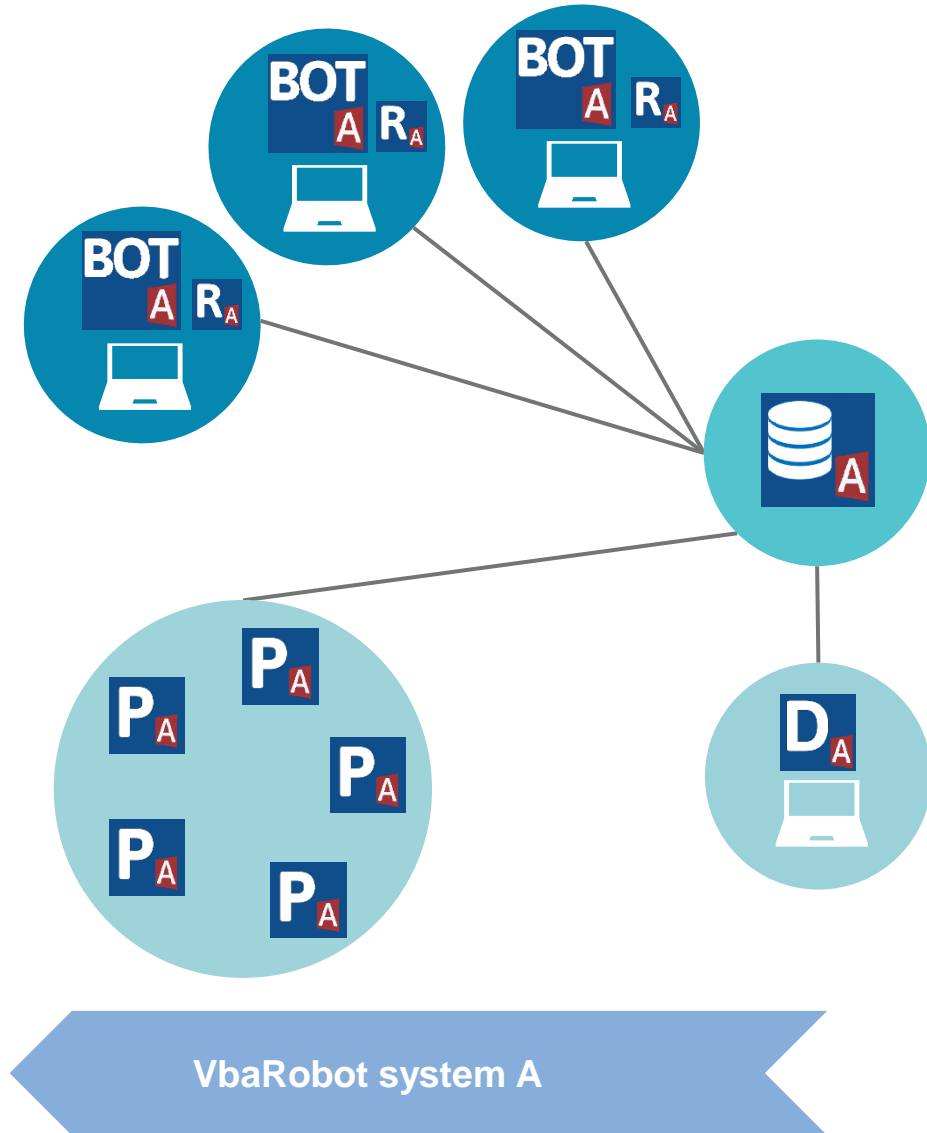

1. Purpose

VbaRobotDatabase file:

VbaRobotDatabase is designed as a simple database without relations that can be easily used and copied to another environment such as SQL Server. Some relationships are executed programmatically inside VbaRobotServer (Bot) file.

It has „open source” and can be modified by the user, but keep root of this database unchanged, like table,field names, data types etc.

2. Front page

Field Name	Data Type
Weekday	Short Text
DoWithinMin	Number
DeadLineTime	Short Text
LastSentDate	Short Text
NextSendDate	Short Text
EmailTo	Long Text
EmailCC	Short Text
OwnerEmail	Short Text
AdminEmail	Short Text
EmailSubject	Short Text
Process_name	Short Text
MasterName	Short Text
TASK_parameters	Long Text
LT_min	Number
Process_Type_ID	Number
Server_Name_ID	Number
LocationName_ID	Number
Saving_min	Number
InWeekend	Short Text
LockedByServer	Short Text
LockedUntill	Short Text
Column_1	Long Text
Column_2	Short Text
Column_3	Short Text
Column_4	Short Text
Column_5	Short Text

There are additional yellow marked columns for future usage in each table.

Important info about table "tblTasksCurrent"

Before "Compact and Repair":

- stop and close all VbaRobotServers connected to this database.
- leave at least one row in table "tblTasksCurrent" to keep the ID (AutoNumber) with last value, otherwise the ID number will be reset to "1" (just add one temporary row with some data in one cell and delete this row it after "Compact and repair").

Compact and repair

Remember to read this before „Compact & repair’

Thank You
